INCOE® – Your partner
for simply reliable process solutions
Company

Global presence:
5 production sites in key regions

On-site service:
Network of professionals serving 45 countries

Cross-continental:
Support for global projects managed on several continents

The original:
Privately owned pioneer in hot runner technology for more than 60 years

Service

Comprehensive project support:
From the idea, to the tryout, to full production

Operational assistance:
Production support, spare-parts service, on-site service

Information and communication:
System design, simulation, project consultation, training

Online:
CAD data and technical documentation over the internet

Product

Global:
The same components, spares, materials and guarantee worldwide

Comprehensive:
System solutions for virtually all markets and applications

Efficient:
Customized solutions using modular components with a small range of spare parts

Reliable:
Simple installation and operation, robust design, high level of operational reliability
Integrated efficiency: Making complex processes simple and straightforward

An important topic for any manufacturing operation is to make complex processes reliable and, above all, manageable and uncomplicated yet efficient. As a pioneer of hot runner technology, this has always been our aim. Our products and employees stand for dependably functioning yet simple-to-use technology and process solutions – beginning with planning and continuing through process support during each step of the collaboration with our customers and your customers.

INCOE modules – the DNA of hot runner technology

- Easy-to-understand product range and small range of spare parts thanks to standard design concept in 7 sizes
- Leak-free flow channel with lower assembly effort and energy consumption thanks to threaded connection
- Protection of the nozzle tip during installation through pre-centering
- Easy adaptation to different applications, thanks to a range of changeable nozzle tips
- Very good temperature control and easy adaptation to different applications thanks to modular heater concept
- Easy replacement of heaters and thermocouples
- Several balancing options available for best mold cavity filling
- Valve pin adjustment possible through the mold plate when installed
